Thinking of buying a used car? There is a lot to consider when buying a car i.e. price, fuel efficiency, seating, aesthetics, storage functionality, and towing capacity. Two very important features that should always be considered are the safety rating of a car (in terms of both avoiding and when involved in a crash) and its risk of being stolen.

Currently, the National Motor Vehicle Theft Reduction Council (NMVTRC) publishes the *CARS Theft Risk Rating*, which provides a five star rating system that shows the theft risk of vehicles in Australia - the more stars the lower the risk.

Recently, Monash University's Accident Research Centre together with the Vehicle Safety Research Group published their *2014/15 Used Car Safety Ratings (UCSR)*. Also using a five star rating system, it shows how well each vehicle protects its driver from death or serious injury in a crash.

The NMVTRC has compiled these two ratings to show the used cars which have received five stars for the UCSR and their corresponding CARS Theft risk rating. This has been conducted for each of the passenger and light commercial vehicle segments.

Using these ratings it is now possible to choose a used vehicle that will provide higher safety protection to its driver and other road users and also a low risk of vehicle theft. Consumers are encouraged to consider choosing vehicles which score highest on both ratings.

In addition, the USCR also provide a "Safe Pick" recommendation for vehicles which provide excellent protection from injury for their own drivers as well as for other road users in the crash and are fitted with Electronic Stability Control (ESC). Vehicles given a "Safe Pick" label are highly recommended.
